# SERVICES

---

## ❑ Hardware Networking

Hardware & Network operation is the first step to understanding routing and switching. The network operates by connecting computers two pieces of equipment; switches and routers.

## ❑ Infrastructure Solutions

Automated RF optimization system delivers high performance in high density environments and under challenging interference conditions.

## ❑ IT SERVICES

Our IT workforce provide us with a real-world pulse on what works, how to improve IT operations and how to assemble the best people to help your business achieve.

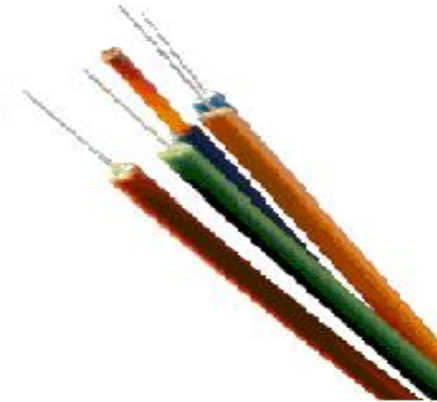

# Why A.C.N solutions?

---

What differentiates A.C.N Solutions from other solution providers is our dedication to service, excellence, expertise, evolutionary approach and reliability.

- Excellence- Quality, accreditations, vendor independence, proven methods.
- Knowledge- Heritage, experience, sector expertise, competence.
- Evolution- Simplifying convergence, addressing needs, managing change.
- Reliable- Protecting your investment, delivering every time, a trusted partner

# PRODUCTS

## ❑ Hardware Networking

Hardware & Network operation with systematic arrangements of routing and switching. The network connects the computers with two pieces of equipment; switches and routers.

## ❑ Copper Cables & Fibre Cables

Structured Cabling infrastructure is the backbone of IT networking infrastructure. It is the nervous of all communication system like ERP, IP telephony, security and other IP services, so the correct choice is paramount.

## ❑ Cabinets

Physical space is one of the most important considerations in the data centre infrastructure. What happens when you have more to add tomorrow? As equipment density grows, so does the volume of data and power cables in your cabinets.
